

Why i-fix Implants?

It is Simple, Safe, Aesthetic.

"At IMPL, it is our passion to innovate and develop cutting edge healthcare solutions delivered with highest quality standards to our users globally through our commitment to excellence."

Make the most comfortable prosthetics for patients.

While a patient uses a temporary removable denture, the denture design is modified suitably with patient's oral structure for the most comfortable design. It is usually hard to achieve good stability and chewing function. However with the implant supported over dentures, it can make sure that the prosthesis design is the most suitable for patient's oral condition while providing the patient, a better chewing function, an ability to eat and it easy to maintain, there by making it most comfortable for the patient.
